

## Welding Automation

Modern welding automation boosts production efficiency. We plan, realize, modernize and service competent welding systems for medium and heavy industry.

**Welding Tower equipped with a telescopic beam.**

We build welding systems for all volumes. The column equipped with a telescopic beam is a space saving solution that can be used in different work areas. When necessary, the welding pipes and wire feeders are adapted for multi-purpose use and the welding method is changeable directly from the control board.

Our innovative braze and seam tracing and flux feeders are built according to the customers' needs. Lincoln Electric's new Power Wave energy sources can increase your profit margin by more than 30%. These, together with Simolin W&E numerous other possibilities, will take productivity to a completely new level.
